*The ideal broker is a broker who automatically executes your order (ECN/STP brokers), forming it from the best deals from liquidity providers.*

Other Example  
 You have sent EURUSD Sell order 5 lots

The ideal broker is a broker who automatically executes your order (ECN/STP brokers), forming it from the best deals from liquidity providers.

- Liquidity provider 1 Price 1.34560 available 2 Lots
- Liquidity provider 2 Price 1.34543 available 2 Lots
- Liquidity provider 3 Price 1.34540 available 5 Lots

Your broker will aggregate your order:

2 Lots from Liquidity provider 1 +  
 2 Lots Liquidity provider 2+  
 1 Lot Liquidity provider 3  
 = 5 Lots  
 PRICE:  
 $2 \times 1.34560 + 2 \times 1.34543 + 1 \times 1.34540 / 5 = 1.34549$

+ mark-up from liquidity providers  
 + mark-up from broker

Usually the broker has Hybrid Scheme, Electronic Access to liquidity providers and Dealing Desk access.

With a Dealing Desk - you trade with the broker (dealer), not the real and global currency market.

The task of the dealer is to destroy your strategy.

Typically, the dealing desk broke- receives 300 κ from 1M for 1 month.

In other words, the broker plans to destroy your account for 3-4 months. [\*\*\*Learn More...\*\*\*](#)

Now the best time to select 3-4 leaders from Automated Trading Championship and start copying orders.
